SUMMARY

Technical project manager with 5+ years in software delivery, including 4+ at Shopee leading cross-functional programs across APAC/LATAM. Owns SDLC governance and release quality, and builds AI tooling and data pipelines for teams.

EXPERIENCE

Shopee, Singapore

Senior Associate, Technical Project Manager **Jan 2026 – Present**

- Led delivery of the customer-facing chatbot (buyer bot and seller bot) and built its accuracy and evaluation framework; in A/B testing, prioritising answer accuracy before wider rollout. Report results, risks, and trade-offs to senior leadership twice a week.
- Lead and coordinate cross-team AI programs spanning the chatbot, audio AI (ASR/TTS), and machine translation, aligning Product, Engineering, Data, QA, and DevOps teams outside my reporting line.
- Lead project manager for the chatbot knowledge base, which gives the buyer bot, seller bot, and other chatbots shared knowledge, business rules, and guidance for consistent answers and handover to human support.
- Designed a request intake pipeline for the Data Mart team and coordinated its delivery, replacing ad hoc meetings and chat requests: an AI agent logs each request, assesses its impact, and drafts the data requirements document for team review. 15 users have submitted 100+ requests through it.
- Designing PJ Agent, an AI-native extension of the internal project management platform that brings project plans, owners, timelines, and issues into one place, with an AI assistant that will answer project questions and prepare project, manpower, and team-priority reports.
- Shipped features into Shopee's production React/TypeScript monorepo (20+ commits) through an AI workflow (Claude Code, Codex): wrote briefs and specs, then reviewed AI-generated code through deploy and QA gates, typically from PRD to tested and deployed within 1 to 2 days.
- Replaced fragmented reporting across 5 product lines (25+ teams) with Python and SQL pipelines that unify internal APIs and Google Sheets into one automated view, cutting weekly backlog review from a full day to 4 hours.
- Onboarded my new team's workstreams onto the internal project management platform, giving the team lead clearer governance over task assignment and resource management.

Associate, Technical Project Manager **Apr 2022 – Dec 2025**

- Owned the full SDLC across Product, Engineering, QA, and DevOps: PRD design, test strategy, release planning, milestones, quality gates, rollback criteria, defect taxonomy, risk and dependency tracking, and escalations.
- Directed expansion into 2 adjacent countries, coordinating 15+ internal teams to deliver 40+ services in 6 months (containerized infrastructure on Shopee's internal cloud, databases, middleware, API integrations, monitoring, and compute and resource sizing), then launched and operated a localized app.
- Grew ads revenue +8% across APAC/LATAM through multi-iteration A/B testing and a phased homepage rollout.
- Drove GMV +10% on the Expat translation feature by leading model training, production deployment, UAT, and A/B experiments from kickoff to launch, coordinating 10+ cross-functional stakeholders.

Xtremax, Singapore

Application Consultant **Mar 2021 – Mar 2022**

- Gathered requirements as business analyst for Singapore government agency clients and led delivery of responsive web apps (HTML5, CSS3, Vue.js, Laravel) across the Agile SDLC through client UAT and sign-off; presented and pitched solutions to technical and business stakeholders.

EDUCATION

Bachelor of Computer Science (Software Engineering), With Honours **2016 – 2021**
Universiti Sains Malaysia, Penang

SKILLS

AI and agents: Claude Code, Codex, Agent Skills, RAG/Knowledge Bases, Prompt Engineering, AI Evaluation
Engineering: Python, Flask, SQL, React/TypeScript, Vue.js, Laravel, REST APIs
Delivery: Full SDLC, Agile/Scrum, Risk and Issue Management, Scope and Change Management, Request Intake, Jira, Confluence, Google Workspace, Miro
Languages: Mandarin (Native), English (Professional), Malay (Conversational)
Work authorization: Singapore Citizen
